HOKKAIDO

Experience makes technology

GENERAL CATALOGUE HOKKAIDO **2025**

Hokkaido, a leading brand in the air conditioning market in Italy and Europe, stands out for its ability to support every supply request and satisfy the most demanding customers. Hokkaido is a brand of Termal Sales, a company of the Termal Group.

Proprietary brand products are known for their excellent value for money and reliability in use.

The depth of the range, the pre- and post-sales services, and the logistics management are the strong points of Hokkaido.

TECHNOLOGY AND PROFESSIONALISM **AT YOUR SERVICE**

Hokkaido stands for reliable products with a high quality-price ratio.

Air conditioning systems that stand out for savings and efficiency, in line with the regulations and needs of the new energy transition.

A wide range of styles and capacities to suit the needs of every environment.

HOKKAIDO

EXPERIENCE MAKES **TECHNOLOGY**

OVER TWENTY YEARS OF EXPERIENCE

The Hokkaido brand is a leader in Italy and Europe in the air conditioning sector for residential, commercial and industrial applications, its success has been built step by step in over twenty years of activity.

The origins of the Hokkaido brand date back to the end of 1998, the year in which the Termal Group began distributing a selection of products for residential air conditioning, whose ***affordable*** value was strongly perceived by the market. The distribution of Hokkaido products immediately had a widespread development throughout Italy, through the channel of professional installers and the national network of consumer electronics stores.

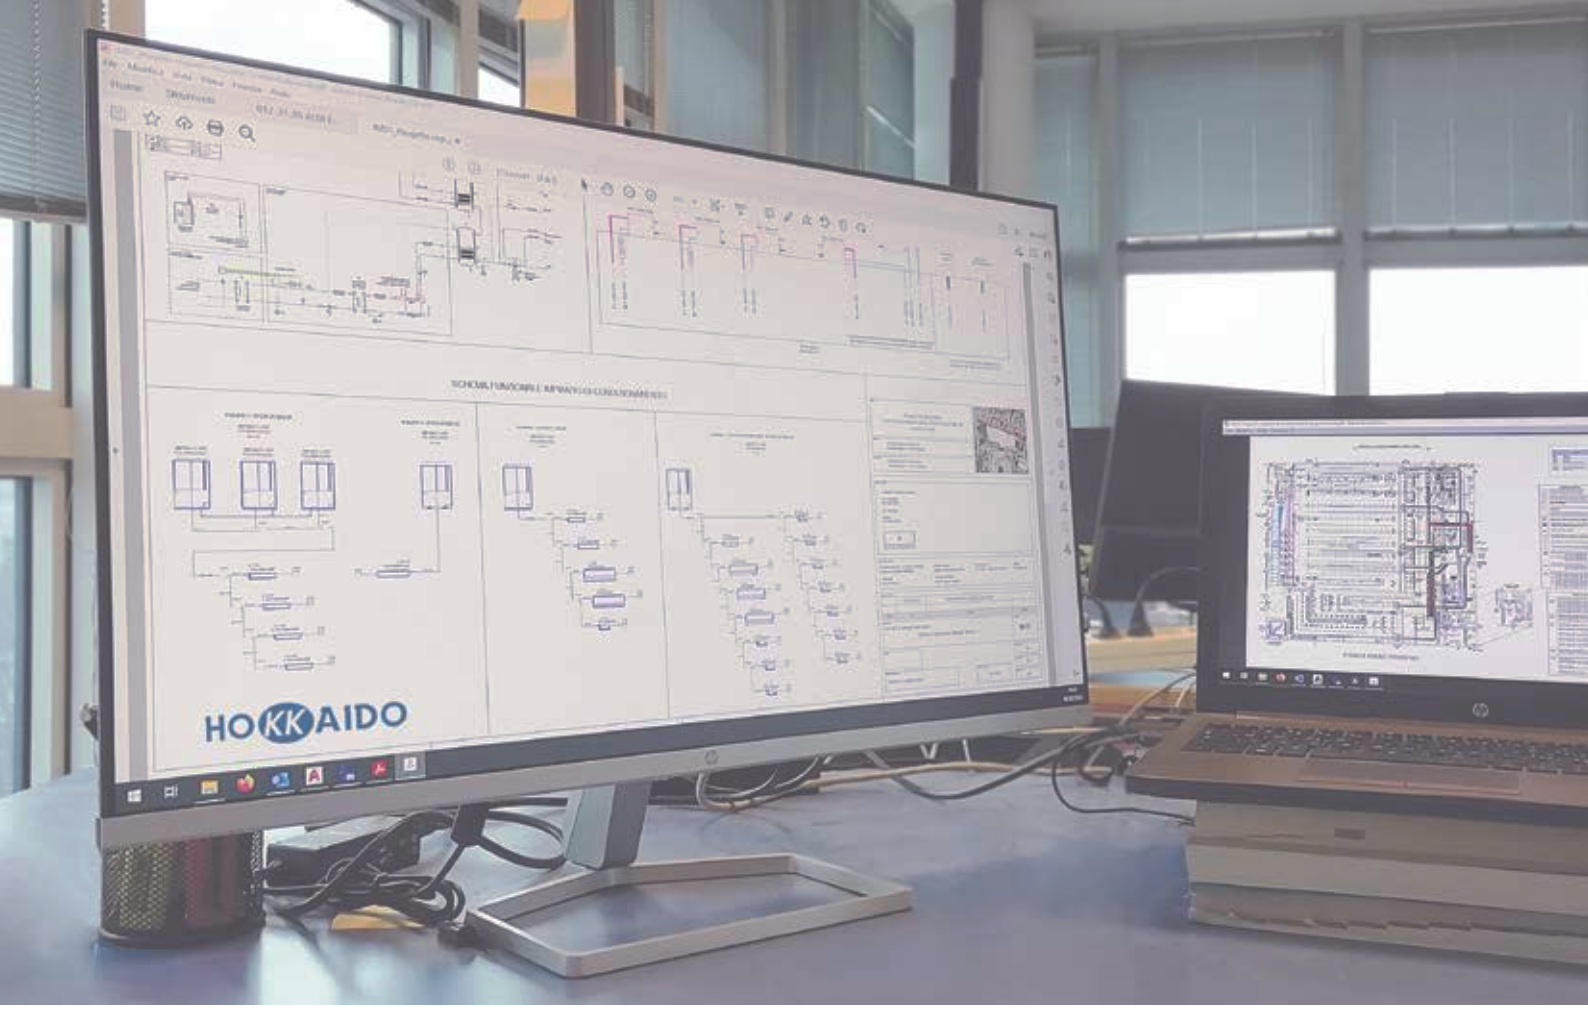
AN INTERNATIONAL REALITY

Since the early 2000s, the international network of dealers and distributor partners has developed rapidly, thanks above all to the variety and reliability of the services offered, which has allowed the Hokkaido brand to develop brilliantly on international markets.

KK

HOKKAIDO, **MORE AND MORE**

- *Wide range*
- *Advantageous quality/price ratio*
- *Integrated logistics*
- *Fast deliveries throughout the EU*
- *Huge assortment of spare parts and accessories that can be ordered online and are available within 24 hours*



ASSISTANCE & **DESIGN**

THE CUSTOMER AT THE CENTER OF THE PROJECT

Through a specialized group of technicians, Hokkaido provides technical and design consultancy on its products.

Our technicians are a point of reference for advice on:

- system sizing;
- installation and functionality;
- quotes.

Estimates and design are carried out with specific software, which optimize system efficiency and installation costs.

THE DISTRIBUTORS NETWORK

HOKKAIDO DISTRIBUTORS NETWORK

Hokkaido products are distributed by Termal Sales on the Italian and international markets through specialized distribution networks, with an integrated logistics service.

Hokkaido has all the experience and network of resources needed to offer versatile and high-tech heating, cooling and domestic hot water solutions.

Visit the official website **www.hokkaido.it**

ADVANCED LOGISTICS

SPARE PARTS ONLINE AVAILABLE IN 24 HOURS

The success of the brand comes from the great attention to customer needs, with particular reference to the logistics organization, which has always been a point of excellence of the Termal Group: rapid deliveries throughout the community, a vast assortment of spare parts and accessories that can be ordered online and available in 24 hours. All this allows customers great operational and commercial flexibility and strong competitiveness in the presence of the various local markets.

OUR HEADQUARTERS

The headquarters of Termal Sales is in Bologna, at the operational center of Termal Group. A modern complex (4,000 square meters of offices and 4,500 square meters of area for product storage) is the operational hub of commercial, logistics and administrative activities.

This center also brings together technical-commercial assistance and training activities, managed directly to ensure high quality standards. The plant, built in a strategic position with respect to the airport and the motorway junction, is constructed according to the most modern architectural concepts for logistics.

PROFESSIONAL TRAINING

PROFESSIONAL TRAINING AND DEVELOPMENT

Hokkaido's technical sales staff believes that the training area is very important for the professional growth of its customers. For this purpose, it organizes training modules for learning, updating and technical improvement.

The Academy Center, at the Bologna headquarters, consists of classrooms dedicated to theoretical demonstration and practical lessons, equipped with working products and related control tools. The courses are structured for the installation, assistance and maintenance needs of residential, commercial, VRF and hydronic systems.

The training offer is always updated based on the new range, the technological evolution of the products and the regulatory adjustments of the sector:

- refrigerant circuit;
- installation issues;
- fault diagnosis;
- assistance;
- design of variable capacity systems;
- using XRV system sizing software.

At the end of each course, participants receive a certificate of attendance and handouts relating to the technical topics covered.

DETRAZIONI FISCALI **BONUS CASA, ECOBONUS** E **CONTO TERMICO 2.0**

	BONUS CASA RISPARMIO Ristrutturazione Edilizia (50% o 36%)	ECO BONUS INNOVAZIONE Riqualificazione Energetica (50 o 36%)	CONTO TERMICO 2.0 SOSTENIBILITÀ Conto Termico 2.0
Cos'è	È un'agevolazione fiscale dedicata agli interventi di ristrutturazione edilizia e alle attività di manutenzione straordinaria finalizzati al **risparmio energetico**, come l'installazione di una pompa di calore. Si tratta di una detrazione IRPEF, in funzione degli scaglioni di reddito, con detrazione per l'anno 2025 pari al 50% delle spese sostenute per abitazioni principali e al 36% per le seconde case.	Il bonus risparmio energetico, noto anche come Ecobonus, consente ai contribuenti di beneficiare di una detrazione IRPEF/IRES relativa alle spese sostenute per migliorare l'efficienza energetica della propria casa. In particolare, **l'agevolazione è concessa quando si eseguono interventi che aumentano il livello di efficienza energetica degli edifici esistenti.**	È un'agevolazione dedicata a chi vuole migliorare l'efficienza energetica della propria casa. In particolare, questo bonus **incentiva la produzione di energia da fonti rinnovabili** in impianti di piccole dimensioni. Tanta più energia rinnovabile è utilizzata per riscaldare casa, tanto è maggiore il contributo ricevuto. È possibile usufruire di un rimborso fino al 65% dei costi totali sostenuti direttamente sul conto corrente.
Soggetti	Persone Condomini	Titolari d'impresa o di reddito agrario	Amministrazioni pubbliche
Come lo ottengo?	Detrazione IRPEF	Detrazione IRPEF o IRES	Rimborso su conto corrente
Tempistiche di pagamento?	10 anni		Entro 60 gg se <€ 5.000 - da 2 a 5 anni in base all'intervento se > € 5.000
Come si calcola	% su costi totali prodotti + manodopera + materiale + consulenza		Fissato dalle caratteristiche del prodotto
Valore percentuale	50-36% per il 2025	50% o 36%	Funzione delle caratteristiche del prodotto, fino al 65%

PRODOTTI	RISPARMIO ENERGETICO	ALTA EFFICIENZA	ENERGIA RINNOVABILE
Condizionatore in pompa di calore	✓	✓	✓
Pompa di calore aria-acqua	✓	✓	✓
Scaldacqua in pompa di calore	✓	✓	✓

Nota: i parametri possono subire variazioni in base agli aggiornamenti delle normative vigenti.

QUALE INCENTIVO PER LE POMPE DI CALORE

Di quali incentivi si può usufruire in caso di installazione di una pompa di calore ad aria o ad acqua?

Generatore sostituito	Generatore installato	Ristrutturazione edilizia	Riqualificazione energetica	Conto Termico 2.0
Nessuno	Pompa di calore	✓		
Caldaia	Pompa di calore	✓	✓	✓
Pompa di calore	Pompa di calore	✓	✓	✓
Caldaia + Pompa di calore	Pompa di calore	✓	✓	✓

LO SAPEVI?

✓ Il bonus Ristrutturazione Edilizia incentiva non solo la ristrutturazione ma anche la **nuova installazione** di una pompa di calore: usala non solo d'estate ma anche per riscaldare casa nelle mezze stagioni, risparmia energia e contribuisci al rispetto dell'ambiente.

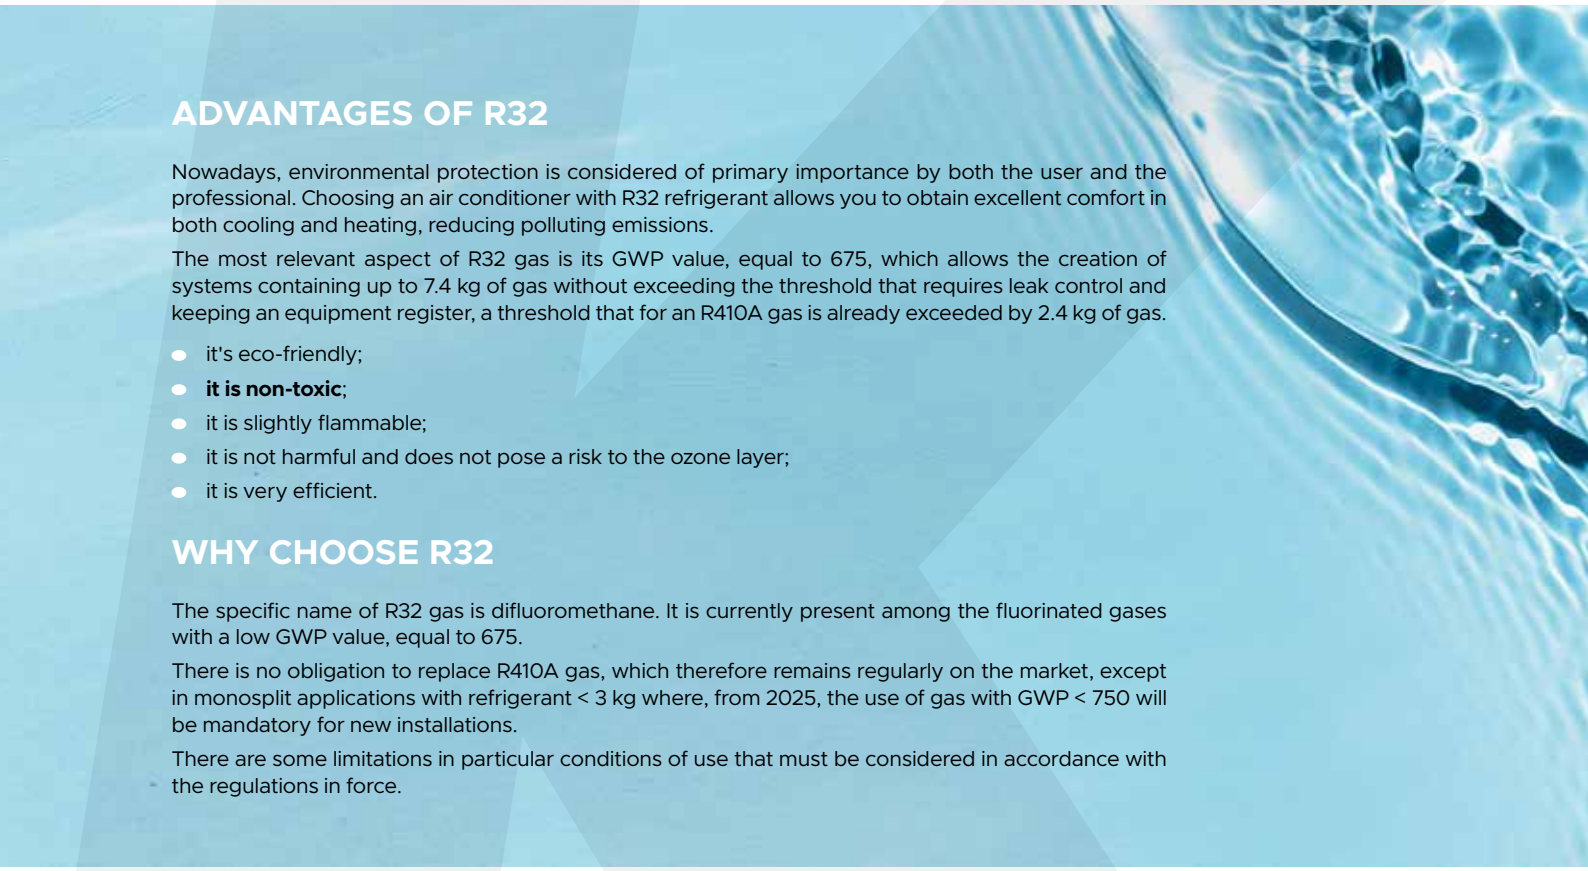
KK

RESIDENTIAL & COMMERCIAL R32

RESIDENTIAL & COMMERCIAL R32, WELLBEING FOR YOUR HOME

The most demanding customers, attentive to technological evolution, the benefits that derive from it and respect for the environment, will find a concrete answer in the new line, which offers a choice in line with the needs and evolutions of the market.

R32 WELLBEING FOR **PEOPLE AND PLANET**



ADVANTAGES OF R32

Nowadays, environmental protection is considered of primary importance by both the user and the professional. Choosing an air conditioner with R32 refrigerant allows you to obtain excellent comfort in both cooling and heating, reducing polluting emissions.

The most relevant aspect of R32 gas is its GWP value, equal to 675, which allows the creation of systems containing up to 7.4 kg of gas without exceeding the threshold that requires leak control and keeping an equipment register, a threshold that for an R410A gas is already exceeded by 2.4 kg of gas.

- it's eco-friendly;
- **it is non-toxic**;
- it is slightly flammable;
- it is not harmful and does not pose a risk to the ozone layer;
- it is very efficient.

WHY CHOOSE R32

The specific name of R32 gas is difluoromethane. It is currently present among the fluorinated gases with a low GWP value, equal to 675.

There is no obligation to replace R410A gas, which therefore remains regularly on the market, except in monosplit applications with refrigerant < 3 kg where, from 2025, the use of gas with GWP < 750 will be mandatory for new installations.

There are some limitations in particular conditions of use that must be considered in accordance with the regulations in force.

STORAGE, STANDARDS AND DESIGN

When storing units containing R32, it may be necessary, based on the quantities stored, to review the Fire Prevention Certificate (DPR 151/2011) to ensure the validity of your insurance guarantee. The transport of dangerous goods is regulated by D.GLS 35/2010. R32 has been classified as slightly flammable by ISO 817 and as such has no stringent limitations in road transport (current ADR), maintaining strict regulations in maritime transport (current IMDG) and aeronautical transport (current IATA).

The EN 378:2016 standard also regulates the applications of appliances that use R32 gas; the maximum concentration limits of the gas in residential applications must always be verified with particular attention to multisplit systems that can potentially concentrate (in the event of leaks) high quantities of refrigerant in small environments. **R32 gaz is heavier than air and in the event of a leak it accumulates at the bottom**; therefore, indoor units follow different regulatory parameters depending on the type of application.

Installation in public buildings is regulated by specific regulations relating to the application of appliances with flammable gases, such as: hotels DM 09/04/1994, shopping centres DM 27/07/2010, buildings for entertainment DM 19/08/1996, hospitals DM 18/09/2012, schools DM 26/08/1992, offices DM 22/02/2006, children's games DM 16/07/2014, airports DM 07/07/2014, interports DM 18/07/2014.

The design, installation and maintenance of appliances with R32 gaz are regulated by the following standards: DM 37/2008, provisions on the installation of systems inside buildings; DGLS 81/2008, text on health and safety at work; F-gas 517/2014, regulation of fluorinated gases; DPR 151/2011, regulation of procedures relating to fire prevention; EN 378:2016, refrigeration systems and heat pumps (requirements for the safety of systems).

With the Ministerial Decree of 10 March 2020 and the subsequent Circular DCPREV 9833 of 22 July 2020 by the Fire Brigade, the technical provisions are updated to allow the possibility of using, in air conditioning and conditioning systems, machines equipped with refrigerants classified as A1 or A2L, thus overcoming the restriction of using only non-toxic or non-flammable fluids.

However, it is recommended to carefully check the regulations in force when using equipment containing R32 gas. Failure to comply with these regulations makes designers and installers of equipment with R32 assume direct legal responsibility for the application of the equipment itself.

CONTROL THE CLIMATE **WHERE AND WHEN YOU WANT**

MORE COMFORT & SAVINGS

With Hokkaido WiFi you can control the climate remotely.

FOR EXPERIENCED SAVERS

Hokkaido Wi-Fi allows you to save money and energy. For example, through Hokkaido apps you can turn on the air conditioning system remotely to gradually heat or cool your home or business.

DEDICATED APP

The dedicated app provides information about the air conditioner and its operation. It also allows you to:

- change temperature settings;
- keep energy consumption under control;
- program the air conditioner;
- check that the system is working correctly.

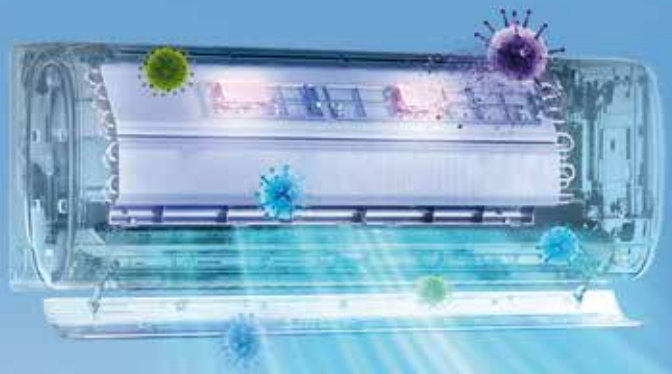
THE RANGE
WALL TYPE MODELS MONO & MULTI



-99.99%

Dust mites, influenza viruses, HFMD, mold, pet germs.

UVC STERILIZATION INCLUDED AS STANDARD (AIKO S)

Sterilization

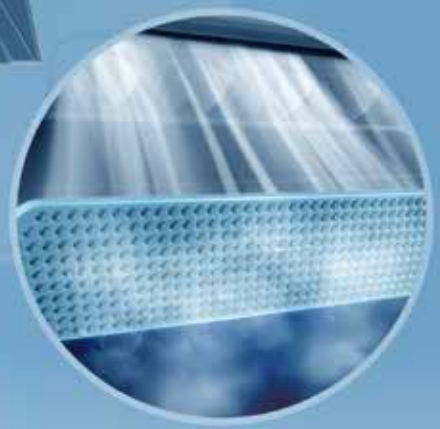
AIKO S releases specific UV wavelengths, which penetrate the core of microorganisms, eliminating them with an efficiency of 99.99%.

Neutralizes viruses, bacteria and molds

by damaging their proteins and DNA.

MULTIPORE TECHNOLOGY
(AIKO/AIKO S)

1935 micro holes on the outlet flap of AIKO and AIKO S allow a smooth and gentle flow of air, avoiding annoying jets of air.



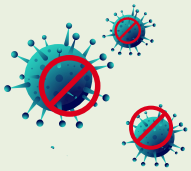
Intelligent flow management through micro-perforated flap.

The unit recognizes changes in room temperature and autonomously chooses which of the two delivery configurations to use.

THE RANGE

WALL TYPE MODELS MONO & MULTI

EFFECTIVE AGAINST VIRUSES AND BACTERIA



-99.9%

Influenza virus, HFMD, Escherichia coli, Staphylococcus aureus.

Self-Cleaning function

It determines the self-cleaning of the exchanger, drying it from any condensation residues. It prevents the formation of mold and bad odors. The sterilization process guarantees the neutralization of 99.9% of the bacteria present inside it.

Filtration system

- purifies and deodorizes the air;
- filters pollen, bacteria and odors;
- purifies and prevents the spread of viruses and bacteria;
- eliminates harmful dust.

HD (High Density) Filter

Positioned on the top of the unit, easily removable from its housing, it retains dust and hair. It is easy to clean.

SMART MANAGEMENT WITH WIFI

All the functions, always at hand, with the app.

The convenience of setting the temperature before arriving home, to find the desired comfort as soon as you return.

WIFI INCLUDED

THE RANGE

WALL TYPE MODELS MONO & MULTI

ELECTRIC RESISTANCE IN THE OUTDOOR UNIT BODY

(AIKO/AIKO S)

The electrical resistance in the body of the outdoor unit prevents it from freezing, prolonging the useful life of the machine and improving its performance.

HEAT EXCHANGER TREATED WITH ANTI-CORROSION COATING

Anti-corrosion treatment for external and internal unit heat exchanger, gives the heat exchanger resistance to rain, salt and other corrosive elements.

It also prevents the proliferation of bacteria and improves heat exchange efficiency.

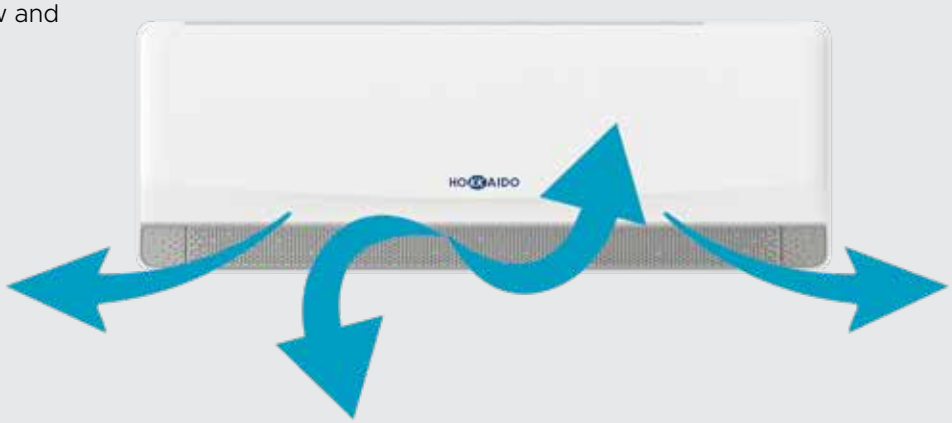
THE RANGE

WALL TYPE MODELS MONO & MULTI

4D AIR FLOW

(AIKO S)

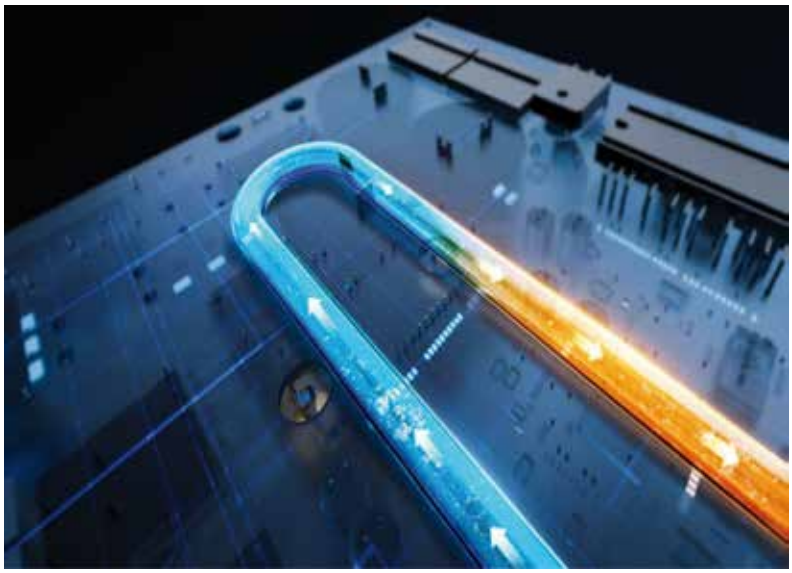
AIKO S spreads air evenly to reach every corner of the room. Four-dimensional air conditioning with horizontal and vertical oscillation action ensures better airflow and provides uniform cooling and heating.



OUTDOOR UNIT'S PCB COOLED BY REFRIGERANT

In Hokkaido wall mounted units the PCB is cooled by refrigerant flow, the PCB temperature is 15°C lower than the classic method.

Unlike traditional air conditioners, where the PCB of the outdoor unit is cooled by air flow, which is inefficient and not very effective.



LUMINA

EFFECTIVE AGAINST VIRUSES AND BACTERIA

1. Value measured according to the harmonised standard EN14511. 2. EU Regulation No. 206/2012 - - Value measured according to the harmonised standard EN14825. 3. EU Delegated Regulation No. 626/2011 on the new energy consumption labelling of air conditioners. 4. Refrigerant leakage contributes to climate change. When released into the atmosphere, refrigerants with a lower global warming potential (GWP) contribute less to global warming than those with a higher GWP. This appliance contains a refrigerant with a GWP of 675. Therefore, if 1 kg of this refrigerant were released into the atmosphere, the impact on global warming would be 675 times higher than 1 kg of CO2, over a period of 100 years. Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product. In case of need, always contact qualified personnel.

1. Value measured according to the harmonised standard EN14511. 2. EU Regulation No. 206/2012 - - Value measured according to the harmonised standard EN14825. 3. EU Delegated Regulation No. 626/2011 on the new energy consumption labelling of air conditioners. 4. Refrigerant leakage contributes to climate change. When released into the atmosphere, refrigerants with a lower global warming potential (GWP) contribute less to global warming than those with a higher GWP. This appliance contains a refrigerant with a GWP of 675. Therefore, if 1 kg of this refrigerant were released into the atmosphere, the impact on global warming would be 675 times higher than 1 kg of CO2, over a period of 100 years. Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product. In case of need, always contact qualified personnel.

1. Value measured according to the harmonised standard EN14511. 2. EU Regulation No. 206/2012 - - Value measured according to the harmonised standard EN14825. 3. EU Delegated Regulation No. 626/2011 on the new energy consumption labelling of air conditioners. 4. Refrigerant leakage contributes to climate change. When released into the atmosphere, refrigerants with a lower global warming potential (GWP) contribute less to global warming than those with a higher GWP. This appliance contains a refrigerant with a GWP of 675. Therefore, if 1 kg of this refrigerant were released into the atmosphere, the impact on global warming would be 675 times higher than 1 kg of CO2, over a period of 100 years. Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product. In case of need, always contact qualified personnel.

FLOOR/CEILING

TWO TYPES OF INSTALLATION

New design and ease of control, elegant and slim profile.

Large air distribution grille with aerodynamic flaps to ensure fast operation and reduce noise levels.

OPERATION

-15~**52°**C
in cooling

-15~24°C
in heating

A++/A+ (6.15~7.91 kW) | Energy efficiency class in cooling/heating

Extended operating range in heating down to an outdoor temperaure of -15° C, and in cooling up to an **outdoor temperature of +52° C**

Maximum flexibility and ease of installation guaranteed by a long length of the refrigerant pipes

Check the maximum gas concentration limits, particularly in residential applications, as required by Standard EN 378:2016.

HEATING

HEATING, THE RANGE THAT MEETS EVERY NEED

The careful process of product selection and system design is developed in Italy and then, thanks to continuous technological research, is implemented in an exclusive range, a point of reference on the hydronic pump market.

HEATING selects and collects excellent products for heating, air conditioning and DHW production in residential and commercial settings.

KŪKI MIZU

AIR-WATER HEAT PUMP MONOBLOC R32

- **5 capacities**: 6-9-12-18-22 kW
- Colour **Touch Screen Wired Control** included as standard

- Automatic management of the heating flow temperature via climate curve

SMART GRID
Reading the trend of the electricity grid, energy savings guaranteed

Control via Wi-Fi app

KŪKI MIZU MONOBLOC R32

A+++
Energy class in heating mode with **35° C** flow water temperature.

A++
Energy class in heating mode with **55° C** flow water temperature.

EFFICIENCY AND PERFORMANCE ALL YEAR ROUND

Heating performance guaranteed down to -25° C outdoor temperature. The Kūki Mizu heat pump can be installed in any climate zone, even in those with the most severe conditions. In summer, cooling is provided up to 45° C outdoor temperature.

-25°/+45°C
Outdoor temperature in heating

The above data refers to the following standards: EN 14511:2018; EN 14825:2019; EN50564:2011; EN12102-1:2018; EN12102-2:2019; (EU)No:811:2013; (EU)No:813:2013; OJ 2014/C 207/02:2014.

1. Refrigerant leakage contributes to climate change. Refrigerants with a lower global warming potential (GWP) contribute less to global warming when released into the atmosphere than those with a higher GWP. This appliance contains a refrigerant with a GWP of 675. Therefore, if 1 kg of this refrigerant were released into the atmosphere, the impact on global warming would be 675 times greater than 1 kg of CO2, over a period of 100 years. Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product.
In case of need, always contact qualified personnel.

HOT WATER

HWMBS 1080-1100 J

Heat pump water heater monobloc 80 and 100 liters series "Ducted kitchen"

GAS R290

80L 100L

anti-legionella cycle

INTEGRATED Wi-Fi

- Monobloc heat pump water heater, designed to be installed inside the kitchen column unit
- **R290** | Refrigerant gas
- **65° C** | Water temperature with compressor only
- **Anti-legionella cycle**
- Stainless steel tank
- Titanium Anode
- Removable upper body with horizontal extraction, to facilitate maintenance and installation operations in narrow spaces
- ErP Ready

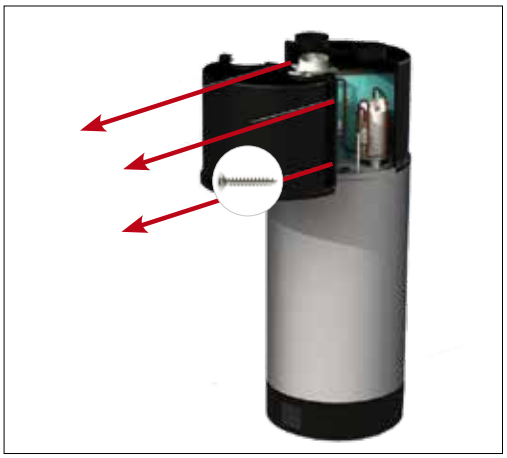
1. Conditions: intake air 20° C DB (15° C WB), water inlet 15° C / outlet 55° C. 2. Test according to EN16147; air 7°C, water inlet 10°C.
3. Directive 2009/125/EC - ERP EU No. 814/2013 (SGS-CSTC certification for all models). 4. Refrigerant leakage contributes to climate change. When released into the atmosphere, refrigerants with a lower global warming potential (GWP) contribute less to global warming than those with a higher GWP. This appliance contains a refrigerant with a GWP of 1430. If 1 kg of this refrigerant were released into the atmosphere, the impact on global warming would be 1430 times greater than 1 kg of CO2, over a period of 100 years. Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product. In case of need, always contact qualified personnel.



HORIZONTALLY REMOVABLE UPPER HEAT PUMP BODY

Easier maintenance and less space required for installation.

COMFORT AT HOME

Designed to be installed in the kitchen, like a traditional boiler, the “Ducted Kitchen” series fits comfortably inside the kitchen column, with air expelled outside.

SAFETY

The titanium anode provides corrosion protection without the need for regular replacement like magnesium anode.

Anti-legionella system: the danger of legionella bacteria is averted thanks to periodic cycles that raise the temperature of the water inside the tank above 70° C.

INSTALLATION WARNINGS

1. It is mandatory to install a safety and non-return valve on the cold water inlet. Failure to do so may seriously damage the equipment. Use a valve with a 0.7 MPa setting. For the installation location, refer to the piping connection diagram.
2. The safety valve discharge pipe must be vertical and must not be placed in an environment at risk of freezing.
3. Water must be able to drip freely from the tube and its end must be left free.
4. The safety valve must be tested regularly to ensure it is working properly and to remove any limescale that may be blocking it.
5. Installation must be carried out in strict compliance with current regulations (R290).

Under no circumstances should the user attempt to intervene on the refrigerant circuit or disassemble the product. If necessary, always contact qualified personnel.

COMFORT AT HOME

Programming to take advantage of any advantageous time slots on the electricity rate and have hot water available when needed.

Two operating modes: maximum savings with the use of the compressor alone or maximum speed with the simultaneous use of the heat pump and integrated electric resistance, to produce large quantities of DHW in short times.

SAFETY

Since the heat exchanger is outside the tank, no contamination between water and refrigerant is possible.

Anti-legionella system: the danger of legionella bacteria is averted thanks to periodic cycles that raise the temperature of the water inside the tank above 65° C.

The titanium anode protects the tank from the corrosive action of water in an inexhaustible way: it guarantees greater reliability and lower maintenance costs compared to a solution with a magnesium anode.

INSTALLATION WARNINGS

1. It is mandatory to install a safety and non-return valve on the cold water inlet. Failure to do so may seriously damage the equipment. Use a valve with a 0.7 MPa setting. For the installation location, refer to the piping connection diagram.

- Timer on/off.
- Adjustable fan speed: low-medium-high-turbo-automatic.
- Vertical swinging of the air outlet flaps.
- ECO mode.
- Sleep.
- Silence.
- Display: Turn the bright display on/off.
- Light: enable/disable display based on ambient brightness.
- iClean: self-cleaning of dust on the heat exchanger, drying of condensation.
- Child Lock.
- 8°C heating.

R32
AIKO

- On/off.
- Modes: cooling, heating, dehumidification, automatic, ventilation.
- SOFT: in cooling mode, the micro-perforated flap closes, avoiding a direct jet of cold air on people.
- I-Feel: temperature sensor on the remote control.
- Timer on/off.
- Adjustable fan speed: silent-low-medium low-medium-medium high-high-turbo-automatic.
- Vertical swinging of the air outlet flaps.
- ECO mode.
- Sleep.
- Silence.
- Display: Turn the bright display on/off.
- iClean: self-cleaning of dust on the heat exchanger, drying of condensation.
- Child Lock.
- 8°C heating.

R32
AIKO-S

- 4D Air Flow
- Health (UVC): air purification through ultraviolet radiation.
- On/off.
- Modes: cooling, heating, dehumidification, automatic, ventilation.
- SOFT: in cooling mode, the micro-perforated flap closes, avoiding a direct jet of cold air on people.
- I-Feel: temperature sensor on the remote control.
- Timer on/off.
- Adjustable fan speed: silent-low-medium low-medium-medium high-high-turbo-automatic.
- Vertical and horizontal swinging of the air outlet flaps.
- ECO mode.
- Sleep.
- Silence.
- Display: Turn the bright display on/off.
- iClean: self-cleaning of dust on the heat exchanger, drying of condensation.
- Child Lock.
- 8°C heating.

R32
Compact Cassette, Slim Cassette, Console, Floor/ Ceiling

- On/Off.
- Modes: cooling, heating, dehumidification, ventilation, automatic.
- Fan speed: low, medium, high, automatic.
- Swing: Adjusts the position of the air outlet flaps.
- Turbo.
- Silence.
- Timer on/off.
- Sleep.
- I-Feel.
- I-Clean.

R32 INDIVIDUAL STANDARD CONTROLS

R32

WCD-05

Standard for ducted medium static pressure.

Optional for: Compact Cassette, Slim Cassette, Console, Floor/Ceiling.

- On/Off.
- Modes: cooling, heating, dehumidification, ventilation, automatic.
- Fan speed: low-medium-high.
- Timer on/off.
- Turbo.
- Sleep.
- Silence.
- ECO.
- Child Lock

R32

wall type
LUMINA MULTI

- On/off.
- Modes: cooling, heating, dehumidification, automatic, ventilation.
- I-Feel: temperature sensor on the remote control.
- Timer on/off.
- Adjustable fan speed: low-medium-high-turbo-automatic.
- Vertical swinging of the air outlet flaps.
- ECO mode.
- Sleep.
- Silence.
- Display: Turn the bright display on/off.
- Light: Turns display on/off based on ambient brightness.
- iClean: self-cleaning of dust on the heat exchanger, drying of condensation.
- Child Lock.
- 8°C heating.

Control Functions Detail

Sleep: the unit regulates the room temperature to achieve maximum comfort along with energy saving. The unit automatically exits this mode in case of 10 hours of continuous operation.

Turbo: the unit operates at maximum speed to quickly reach the desired cooling or heating temperature.

Display: turn on/off the unit's display.

Silence mode: attenuation of the compressor frequency with consequent reduction of noise emissions.

Heating Function 8°C: prevents the room temperature from falling below 8° C.

I-Feel Function: adjusts the room temperature according to that detected by the remote control to obtain maximum comfort.

Eco Function: the system will modulate the operating frequency, creating the right compromise between performance and energy saving.

iClean: self-cleaning of dust on the heat exchanger and drying of condensation to prevent the formation of mold and bacteria.

Swing: positioning of motorized flaps.

Soft Function: in cooling mode, the micro-perforated flap closes, avoiding a direct jet of cold air on people.

Health Function (UVC): purification of supply air by germicidal ultraviolet radiation.

Light: automatically activate/deactivate display based on ambient brightness.

4D Air Flow: the flaps move automatically in all directions, distributing the supplied air evenly and ensuring maximum comfort.

Timer on/off: on or off timer, settable with a time range from 0.5 to 24 hours.
